# fast, frictionless feedback*

* You no longer need to explain your half-formed ideas to a stranger in a room. You have the prompt; the model has the answer; the lecturer has the automated rubric. The loop is perfect. Knowledge is transferred from a database to a document, then scanned by a processor. It is a miracle of modern logistics. No one has to be confused. No one has to be vulnerable. No one has to say, “I don’t get it”, and no one has to see the moment the light comes on in your eyes.

Where are you in this loop? No one has to care. Feedback is someone caring. The rubric scores you; a person sees you.

Don't let the loop close without you.
