thinking with AI?

Thinking is a practice.
Practices have conditions*.

* AI extends some of those conditions and displaces others.

This campaign is for

the slow bit, where you happen.

the voice you cannot quite hear yet.

asking whose future, and why this one.

weirdness, which is how dissent stays alive.

seeing what your tool is made of, and who pays for it.

what AI cannot say, which is where you are still needed.

attention, which is yours to keep and not theirs to spend.

the work that is yours while you are still doing it.

feedback, which is someone caring.

teaching, which only you can mean.

the time in which you become.

the conditions to think.
