

Risk Assessment Form

| Title of Risk Assessment | Use of Lab MAS 3.04 | Date of assessment | 06/10/2023 | |
|-----------------------------|---|---------------------------------------|------------|--|
| Department | Polymer RTP | Date review due | 05/10/2024 | |
| Description of Task/Process | Use of thermal and mechanical analysis instru | uments, including sample preparation. | | |
| Assessment carried out by | Daniel Lester | | | |

Additional information

This lab contains 9 functioning instruments DSC-MT, DSC-PE, DSC-TA, TGA-MT, TGAMS, TGA-TA, DMA-MT, DMA-PE & Rheometer, and thermal conductivity. Sample preparation required to make samples instrument ready is typically weighing samples into respective crucibles (TGAs and DSCs) or mounting samples (DMA and rheometer). In these cases contact with the researchers own samples must be taken into account. If users are bringing hazardous substances into the lab they must have their own materials risk assessments. Any other users within the vicinity should be made aware of any substances that they could possibly come into contact with. Gloves, lab coats and safety specs are to be worn as appropriate for sample preparation. Gloves must be removed when using computers to minimise transfer of chemicals.

There is a fumecupboard available for use, if the oxygen depletion alarm sounds, the user should press the extract boost button and inform facility staff.

No instrumentation is to be used other than that which the individual is trained for, however, they should be aware of the temperature and mechanical risks possible in the lab. This includes the furnaces on all 9 DSC, TGA, TC and DMA instruments, and the liquid nitrogen present on the Mettler Toledo and TA DSCs, PE DMA and thermal conductivity.

The lab is an instrumentation lab and is not appropriate for any synthetic work.

For any minor injuries, first aid is available immediately outside of the lab to the right. An eyewash is located at one end of the lab. A list of local first aiders can be found immediately outside of the lab.

A workbench is located in the lab which is only allowed to be accessed by RTP staff.

Lab access is restricted to trained users and a keycode is required to enter the lab. All users are trained and inducted by RTP staff. This includes information on what are the hazards and how to avoid them where possible. Any non-inducted lab visitors will be escorted and prevented from interaction with any equipment.

| Hazards and how they may cause harm | <u>Who may be</u> <u>at Risk?</u> | Existing <u>Control Measures</u> | Current <u>Risk Level</u> (VL,L,M,H,VH) | Where current risk is M, H or VH, what additional <u>Control</u> <u>Measures</u> are required? | Action required by whom & by when? | Final <u>Risk Level</u> |
|---|---|---|---|--|--|----------------------------|
| Heat – burning by touching the inner parts of the oven, blow torch, soldering iron | Users of the instrument, cleaners, visitors | Access to internal parts of the furnace is limited and training is given to dissuade users from touching the internal parts. Welding torch and soldering iron kept on separate work bench and only trained persons allowed access. Non-inducted users to be chaperoned by trained member of lab. | L | | | |
| Cold burns from Liquid nitrogen. | Users of the instrument, cleaners, visitors | Liquid nitrogen is provided in a sealed, appropriate pressurised dewar. Use of liquid nitrogen is only permitted for trained users. Users of LN2 for DMA are provided thermally | L | | | |

| | | resistant gloves for its use and training is given for its use for that particular instrument. As part of training/lab induction users are prohibited from interaction with LN2 or its containers without explicit training. Non-inducted lab users are chaperoned to prevent interaction. | | | |
|----------------------------|-------------|--|--------------|--|--|
| Asphyxiation from Liquid | Users | Transport to and from lab | | | |
| Nitrogen | of the | restricted to trained users. Room | | | |
| | instrument, | is large and well ventilated. | М | | |
| | cleaners, | | | | |
| | VISITORS | No shou isol visles and | | | |
| iviecnanical/moving | Users | Mechanical risks are | | | |
| parts | instrument | where possible. Autosamplers on | | | |
| | cleaners | instruments have mechanical | | | |
| | visitors | arms however they are not | | | |
| | VISICOIS | mechanically strong and are kept | | | |
| | | within a case when in use. As part | VL | | |
| | | of induction users will be taught | | | |
| | | the associated mechanical risks of | | | |
| | | the labs and how not to interact | | | |
| | | with moving parts. Non-inducted | | | |
| | | users to be chaperoned by trained | | | |
| | | member of lab. | | | |
| Exposure to | Users | Risk assessments for an | | | |
| chemicals from samples | of the | individual's materials must be | Dependent | | |
| (inhalation, skin contact, | instrument, | known to the individual, for | on material. | | |
| ingestion) | cleaners, | example those in laboratory | M | | |
| | visitors | books. PPE must be worn where | | | |
| | | appropriate. Users must take care | | | |

| | 1 | | | | |
|-------------------------|-------------|-------------------------------------|-----|----------------------------|-----|
| | | not to allow their materials to | | | |
| | | come into contact with others, | | | |
| | | and others should not interfere | | | |
| | | with materials of others. User | | | |
| | | chemicals to be contained and | | | |
| | | used within fumecupboard | | | |
| | | (engineering control) when | | | |
| | | possible. Any of these chemicals | | | |
| | | should be present in low | | | |
| | | quantities (under 100 mg). Eating | | | |
| | | and drinking prohibited to | | | |
| | | prevent accidental consumption. | | | |
| Exposure to | Users | The specific risks are | | Electronic lab | |
| chemicals stored in the | of the | covered in the hazard assessment | | inventory would be useful. | |
| labs (inhalation, skin | instrument, | for this lab. Cabinets are provided | | ChemTech working to | |
| contact, ingestion) | cleaners, | for solvent and chemical storage. | | implement new system. | |
| , | visitors | Chemicals stored are kept as low | | | |
| | | as possible. A fumecupboard is | | | |
| | | available for chemical | NA | | N.4 |
| | | manipulation as are gloves and | IVI | | IVI |
| | | correct disposal. Access to | | | |
| | | chemicals is limited to laboratory | | | |
| | | staff. Eye wash provided for | | | |
| | | accidents. Eating and drinking | | | |
| | | prohibited to prevent accidental | | | |
| | | consumption | | | |
| Slips, trips and falls. | Users | Walkways are kept clear | | | |
| | of the | and floors kept clean and dry. Drip | | | |
| | instrument, | trays in place where there is | L | | |
| | cleaners, | potential for water to pool (i.e. | | | |
| | visitors | under the liquid nitrogen dewar). | | | |

| Fire hazard | Users | Fire risk always a possibility. | | | |
|-------------|-------------|--------------------------------------|-----|--|--|
| | of the | Flammable materials kept to a | | | |
| | instrument, | minimum. Flammable chemicals | | | |
| | cleaners, | kept in fire retardant cabinet | | | |
| | visitors | when not in use. | | | |
| | | Flammable/explosive gas | | | |
| | | cylinders present (H2). These are | | | |
| | | ONLY to be used by very few | | | |
| | | trained personnel. They are | | | |
| | | stored in suitable fixtures and are | | | |
| | | out of the way of the | | | |
| | | thoroughfare of the lab. Cylinders | М | | |
| | | and regulators are of suitable | 141 | | |
| | | aged and replaced where | | | |
| | | necessary. | | | |
| | | Much electrical equipment | | | |
| | | present which could lead to | | | |
| | | electrical fires however, electrical | | | |
| | | equipment is regulated and tested | | | |
| | | and no electrical items are | | | |
| | | overloaded. | | | |
| | | Fire extinguisher provided for | | | |
| | | emergencies for use by trained | | | |
| | | individuals. | | | |

Work should not be carried out until the assessment is completed and all required control measures are in place.

Overall Final Risk Rating (Highest level in final column above)

м

Additional Comments from Risk Assessor

| (e.g. funding or practical implications) | | | | |

| | Severity | | | | |
|------------------|-------------|----------|-----------|-----------|-----------|
| Likelihood | Superficial | Minor | Serious | Major | Extreme |
| Unlikely | Very low | Very low | Low | Low | Moderate |
| Possible | Very low | Low | Low | Moderate | High |
| Likely | Low | Low | Moderate | High | Very high |
| Very likely | Low | Moderate | High | Very high | Very high |
| Extremely likely | Moderate | High | Very high | Very high | Very high |

| | Risk Level |
|-----------|---|
| Very low | Acceptable risk - no action required |
| Low | Tolerable risk - further control measures not required, but status must be monitored |
| Moderate | Further control measures required to reduce risk as far as is reasonably practical |
| High | Urgent action required to allow activity to continue |
| Very high | Risk intolerable - activity must cease until the risk has been reduced |

See '<u>Matrix for risk evaluation</u>' for further guidance.
