

# Maxime Lafarge

## University Hospital Zurich, Switzerland

Maxime Lafarge is a postdoctoral researcher in the Computational and Translational Pathology Lab at the University Hospital Zurich. As a computer scientist with a strong interest for biomedical image analysis problems, he completed his PhD project at the Eindhoven University of Technology, for which he developed new methods to improve the robustness of machine learning solutions in the context of computational pathology. His current research concerns the extraction of molecular information from histopathology images: this work aims at contributing to the discovery of new prognostic biomarkers and ultimately to the improvement of patient care.
