

Nathaniel Braman

Picture Health, USA

Nathaniel Braman received his PhD in biomedical engineering from Case Western Reserve University in 2020 with support from the NCI and NIBIB of the NIH. During this time, he also worked with IBM Research to develop weakly supervised learning approaches for incidental disease detection in radiology scans. Following his defense, he joined Tempus Labs where he worked on multimodal machine learning in glioma and other diseases. He is currently Senior Director of AI at Picture Health, where he leads a team building precision medicine tools leveraging radiology and digital pathology to improve care across the cancer journey. Additionally, he serves as a member of 2023 MICCAI organizing committee and as an organizer of MIABID22 - a dedicated MICCAI workshop for AI-enabled imaging biomarkers.
