

Prof. Marc Aubreville

Technische Hochschule Ingolstadt, Ingolstadt, Germany

Marc Aubreville is a computer vision researcher with years of experience in medical image recognition. His main focus is AI-based tumor diagnosis and, in particular, domain-adaptation across scanners of various medical imaging entities. Prior to his doctorate (with distinction) in 2020 and being appointed a tenured professor soon thereafter, he gained ten years of industrial experience in medical device research and development. He's currently supervising four PhD theses in the field of medical image recognition using methods of AI.
