

# Dr. Sebastian Klein

University Duisburg-Essen, Essen, Germany

Sebastian Klein studied medicine at the University of Münster and spent a research year at Harvard Medical School. He then completed his residency at the Department of Pathology in Cologne and Münster. His scientific training included data analytics from unstructured and structured data, as well as translational cancer research with a focus on the tumor microenvironment. After moving to the Department of Hematology and Stem Cell Transplantation in Essen, where he built an analytical ecosystem for the molecular assessment and reporting of hematological cancers, his primary interest shifted to translational lymphoma research and diagnostics. Personally, he enjoys endurance running, Zwift virtual bike racing, and is the father of two little kids.
