Creating with Smell:

Transdisciplinary Explorations into Olfaction and Well-being.

NATHAN COHEN - Honorary Associate Professor

Of all our senses smell is perhaps the least considered yet it profoundly impacts our perception of the world we live in. There is a rich history of our endeavours to capture and use smell. From its power of attraction and repulsion, ability to evoke memories and its necessity for us to enjoy the many and various delights of what we eat and drink, smell plays a pervasive and vital role in most of our everyday lives despite its invisibility. In this talk the artist Nathan Cohen will discuss his transdisciplinary collaborations with scientists, engineers, technologists, psychologists and graduate researchers in the creation of interactive olfactory environments, objects and artefacts, investigating smell as a creative medium that supports memory and well-being.
