Structures

Research Journal of The Institution of Structural Engineers

**FIRST PAPERS
NOW AVAILABLE**

www.elsevier.com/locate/structures

This journal aims to publish internationally-leading research across the full breadth of structural engineering. Papers would be particularly welcome in which the high-quality research would benefit from wide readership of academics and practitioners, such that not only high citation rates but also tangible industrial-related pathways to impact could be achieved.

- Collaboration between The Institution of Structural Engineers and Elsevier
- Editor-in-Chief: Professor Leroy Gardner (Imperial College London)
- All published articles available from the homepage

Structures

Research Journal of The Institution of Structural Engineers

In the first issue:

Sustainable reinforced masonry walls under lateral in-plane load: Experimental behavior and code-based predictions

Richard P. Clarke

Using the vibration envelope as a damage-sensitive feature in composite beam structures

Stavros Kasinos | Alessandro Palmeri |
Mariateresa Lombardo

Thermoelastic buckling and post-buckling of weakened columns

Guotao Yang | Mark A. Bradford

Engineering stress solutions for bolted and pressurized steel structures

Nelli Aleksandrova

Economical design procedures for built-up box sections subject to compression and bi-axial bending

Osama Bedair | P. Eng

Characterization of concrete specimen fracture response: 2D numerical study

N. Trivedi | R.K. Singh | J. Chattopadhyay

Ultimate capacity of structural steel cross-sections under compression, bending and combined loading

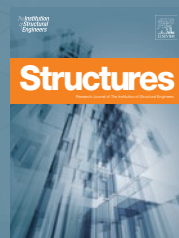

Andrew Liew | Leroy Gardner

High strength rubberized concrete containing silica fume for the construction of sustainable road side barriers

Mohamed Elchalakani

Topics covering (but not limited to):

- materials
- structural form
- structural design
- construction engineering
- structural innovation
- extreme events
- sustainability
- architectural topics (that impact structural performance)
