3B	The presentation did contain many good ideas. However, the overall design seemed quite complicated for an elderly person. Also, some devices seemed rather obtrusive. The concept design slide was quite clear but due to the number of devices, the overall concept was rather hard to see.	7

3B	Overall concept was good, however it seems to me that there there were too many sensors used. Some of the ideas were obtrusive. Readily available components were used. etc Presentation good, however slides had too much text on them.	7

3B	Good ideas but a little intrusive on a persons body with the final solution. Provided some good answers but some contradictory. Slides clear and gave a good overview. High price but well backed up.	7/10

3B	I think they could've planned it better. There are devices on the person's body body which the person might not want. I really don't think that the system is fail safe.	6

3B	Inventive ideas and solutions e.g. accelerometers on drawers Text-heavy layout on slides Some weaknesses but well justified under rigorous questions Teamwork appeared good Effective system recap at end of presentation	8
