Grant activation

Research ethics committee (REC) submission and meeting

Submission of application to R&D

REC favourable opinion  
decision anticipated to be received

Site specific information forms to be completed.

Site set up initiated and training

R&D approvals anticipated

Site training and opening of first two sites

## Foot and Ankle Research Network:

Our aim is to develop a research network to disseminate information on current foot and ankle research, for the generation and collaboration of projects and share best practice. Please let us know if you are participating in any other foot and ankle research or would like us to include relevant trials within our newsletter. The PATH-2 trial is being conducted by the University of Oxford and this trial is specifically looking at the use of platelet rich plasma injections in patients with Achilles tendon rupture.
