Since opening for recruitment in August 2010 we have screened over 10,000 patients. which is a huge achievement and will provide valuable data for analysis.

This highlights how even though recruitment may have been low in some months, centres worked constantly, screening potential patients.

Thank you to everyone for the effort to complete and return this data.

Deviations

During the course of the study there were 38 patients who did not received their allocated treatment following randomisation. There were many reasons for this from being unable to achieve satisfactory reduction in theatre to surgeon preference. Well done to those centres who managed to follow the protocol for all of their DRAFT patients namely **Addenbrookes, Wansbeck, Wexham, North Tees and North Tyneside.**
