

A randomised controlled trial of percutaneous fixation with Kirschner wires versus Volar locking-plate fixation in the treatment of adult patients with a dorsally displaced fracture of the distal radius.

Reminders and updates

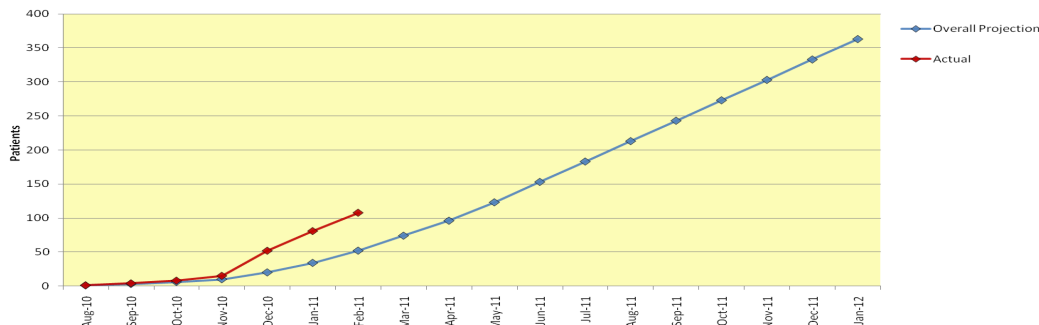

- **ALL** distal radius fractures must be **screened**. If a patient is seen twice (e.g. originally treated conservatively and then later requires an operation) they should be added to the screening log twice.
- If patients have an **ulna fracture** as well as a distal radius fracture, please give details as **another injury** on page 4 of the CRF booklet (question 3, section 1).
- If a patient requires **further surgery** at a later date (e.g. reduction not held satisfactorily with wires so ORIF scheduled) please complete an **SAE form**.
- **CRF booklet v2** will be posted out in March. Some forms have been amended slightly and a list to summarise the changes will accompany the booklet. RAs should continue to use all v1 booklets they have before using the new booklets.

Recruitment Update

We recruited 27 patients in February and in total have **108** patients which is fantastic so thank you to everyone for your hard work.

Welcome on board to the team at **Addenbrookes** who opened for recruitment in February and well done to **UHCW** and **James Cook** for exceeding their monthly recruitment target .
