

RECOVERY-RS

RESPIRATORY SUPPORT

Can my site take part in RECOVERY-RS?

An URGENT PUBLIC HEALTH COVID 19 priority study comparing CPAP and/or HFNO / oxygen therapy only

A pragmatic trial designed to be delivered in context of pandemic

CPAP and / or HFNO	Flexible design allows randomisation to both, CPAP only, or HFNO only.	
Are patients outside of ICU eligible for enrolment?	Screen potentially eligible patients wherever they are being cared for in the hospital	
Oxygen supply concerns	Patients can be randomised to CPAP and HFNO while monitoring oxygen supplies with your local estates teams.	
Capacity - PI	If ICU/Respiratory PI not available consider anaesthetists or other options. Consult with trial team.	
Capacity - Site	Simplified trial design to reduce trial burden. Data collection only at trial entry and day 30 (or discharge).	
CPAP supply	See the trial website for details on how to request CPAP devices.	
Co-enrolment	See the trial website for further details of all studies co-enrolling with RECOVERY-RS.	
CPAP and HFNO aerosol-generating	Use of appropriate PPE (as per national guidelines).	
Training	Online training slide sets are available on the website.
