Dear <<PARTICIPANT NAME>>,

REcurrent Patellar dislocation: Personalised therapy or OpeRative Treatment? (REPPORT)

Thank you for taking part in the REPPORT study, a national study for people with kneecap dislocation. We are very grateful for your time and ongoing participation in the study.

We are pleased to let you know that we have recently launched the **MyRecovery** app, where you will be able to access and manage your <<Personalised Knee Therapy/Post-op rehabilitation>> exercise plan, and complete your follow-up questionnaires. Please note that you can still complete your questionnaires on paper, electronically via Qualtrics, or over the phone with a member of the team if you would prefer.

You will shortly receive an email and/or text message inviting you to create your MyRecovery account. **Enclosed with this letter is an information leaflet with step-by-step instructions on how to register for the app and an overview of its key features.** You can also scan the QR code on the leaflet to view this information online.

The MyRecovery app is provided by FutureHealthWorks. Details about how your data is used and stored are included in the Patient Information Sheet that you received when you joined the study. A copy of this is also available on our website: https://warwick.ac.uk/fac/sci/med/research/ctu/trials/repport/public/.

If you have any questions, please do not hesitate to contact us at the details listed below, and thank you again for your continued support of the REPPORT study.

Kind regards,

<<NAME>>
