

**Department of Physics
Warwick University**

**Action point document arising from the meeting of the
Student Staff Liaison Committee on 2nd May 2016**

I.T.

- The memory is full in some PCs in the Physical Sciences workroom.
Action: M. Pounds
- The SSLC website on the SU pages is not sending updates to all student committee members.
Action: J. Duffy

First year

- PX150 required knowledge of matrices before they had been introduced in PX149.
Action: M. Pounds
- Access was requested to Moodle pages for all physics modules, rather than just those for which one is registered.
Response: Almost without exception, all Moodle pages for physics modules are viewable by any member of the university, and can be accessed from the online undergraduate handbook at http://www2.warwick.ac.uk/fac/sci/physics/current/teach/module_home/. The only module pages linked to from the Moodle home page will however be for those modules for which a student is registered.

Second year

- Access to the lecture notes from last year's presentation of Electrical Power Generation was requested.
Action: We are considering having material from previous incarnations of modules available on each module's homepage (some already do this).
- Some students reported unexpected time pressures during the PX276 exam.
Response: The lecturer reports that the average mark for the paper was as expected.
- Some students suggested that the uploaded marks for the most recent in-class test for PX275 were incorrect.
Action: The lecturer has confirmed that the marks are correct.
- Some students again requested whether lab reports could be marked anonymously.
Action: M. Pounds

Third year

- Some students reported finding the Mathematical Methods III exam more difficult than in previous years.
Response: The lecturer reported that the average mark for the paper was as expected.

Fourth year

No issues were raised.
