

**Operating Instructions for the probe PH MASDVT850W6 BL7 103RH-17O (H13895/0001)**

<i>low frequency range</i> (with short cut)	<i>high frequency range</i> (with 10pF serial capacitor)
<b>21 – 93 MHz</b>	<b>73 – 117 MHz</b>

1. Unscrew (but don't remove) 4 screws at the flange of the *shielding tube* and remove the tube
2. In case of operating in the lower X-range (21...93MHz) it is necessary to install a *short cut* as shown in figure 1  
In the other case in the upper X-range (73...117MHz) install a **10pF** serial capacitor as shown in figure 2
3. Slide on the shielding tube and lock it

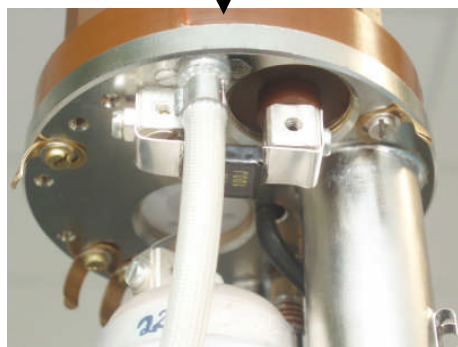

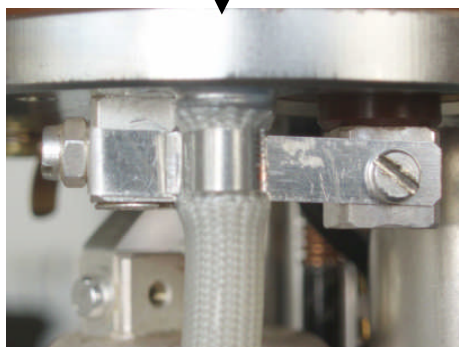

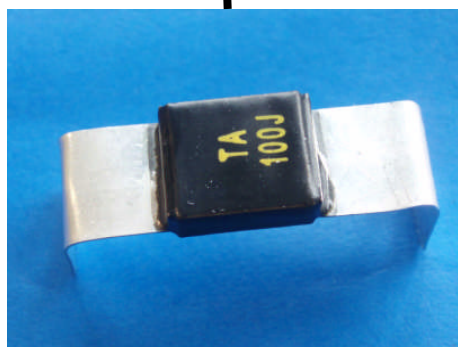

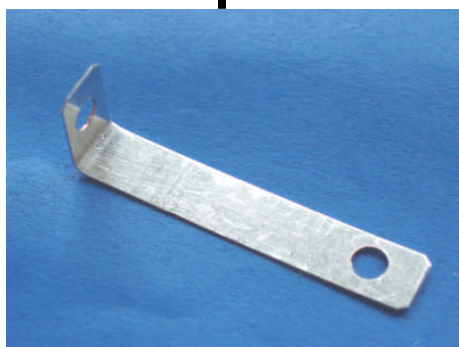

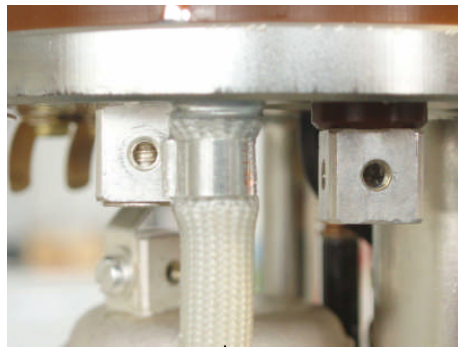

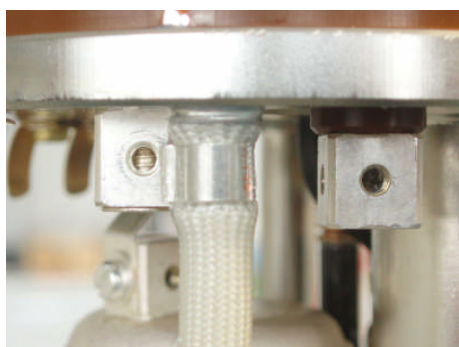

Figure 1: low range modification
