

## **Feedback 2nd Part of ST345**

(Dr. habil. Dr. rer. nat. S. Assing, pronouns: he/him/his)

First things first: I was not able to maintain the attention of the 10 registered students as most of the lectures were attended by 4 students, only, and on one occasion I was even down to two students. This student-behaviour might be due to lecture capture, but maybe not.

However, four students filled in the feedback form, so, assuming they were the ones who attended the lectures, they kind of liked it—thanks for the feedback. And, only counting attendees, my response rate was 100%.

The only real problem with my lecture seems to be that students are not sure which parts will be examined. This problem has been addressed, please check the 11 March afternoon lecture capture for further details. Furthermore, apart from the revision lecture in May, students can always come during my office hours in Term 3 to discuss details of whatever calculation I have done.
