

ST222: Games, Decisions and Behaviour. Recent Module Marks

As requested by the SSLC here are summaries of marks in recent years.

The histograms show proportions of students in the various classes:

70–	1
60 – 69	2(1)
50 – 59	2(2)
40 – 49	3
< 40	Fail

Note that years may be omitted, for example (for reasons of both confidentiality and instability) if there were five or fewer students taking a module.

For each plot, the black spot on the x -axis represents, roughly speaking, the mark that an average Statistics student, who did averagely well on this module, would have received (fitted using '*median polishing*').
