

How to make your own Walk-through paper

Material required:

- A4 size paper
- Scissors
- Ruler
- Pencil

Step by step instructions:

1. Download the template of the walk-through paper or you can draw your own template on a piece of paper. Make sure to keep the gap between the cuts the same.

2. Fold the A4 size paper in half lengthwise.

3. Use scissors to cut along the fold except for the first and last loops.

4. Carefully stretch the paper and play with it!

To explore this idea further, consider:

- What happens when the gaps between the cuts change?
- What other properties could you change of the paper? Could you make it stronger for example?
