CURRENT PROJECTS:

Much of my latest work is at the border between social science and science. It is on so-called biomarkers, including levels of blood pressure and C-reactive protein, and on the economic and social determinants of mental health and happiness. I am interested in questions such as: to what extent does economic progress improve psychological wellbeing? Some of this is joint research with the psychologist Prof. Gordon D. A. Brown. I am also interested in status and in understanding how the state of the mind affects physical health and longevity.

I am working on a mathematical model of optimal hedonic adaptation, on how mental wellbeing reacts to life shocks, and on statistical methods that would allow us to calculate how the courts could decide upon appropriate levels of compensation for 'emotional damage'.

Other work is on the economic impact of high energy prices; unemployment and homeownership in Europe; statistical bias in peer review; the effects of leadership; the existence of the wage curve in modern US data; and on wind power and the feasibility of renewable energy sources.

A long-standing interest in labour markets continues in research on job satisfaction and stress in the workplace.

TEACHING:

Past tutorial teaching, at Oxford and Princeton, on undergraduate and graduate papers, including Economic Principles, Economic Organization, Labour, Money, and Introductory Economics.
