

Module 1: Getting going with careers Information

'Your Recommendations': general notes

This activity asked for your opinion about resources in terms of which you would recommend to different people who may seek your advice. By definition there is no right or wrong answer, but here are a few notes about each scenario which may interest you... but feel free to disagree!

A **Key Stage 3 science teacher** seeking to inspire students to consider the power industry might find much to excite the group about STEM (science, technology, engineering and maths) career in **Futuremorph**, and could then move on to use **thinkpowersector** – their you tube channel might prove to be a useful resource.

A **parent** who wants to research careers in low carbon technology may find the parent section of **Futuremorph** useful as well as the section in **euskills** about low carbon technology. A similar resource about the Green Economy on the **National Career Service** website may be of interest as would the labour market information in **LMI Future Trends**.

A colleague preparing an LMI presentation would find a great deal of useful material in **LMI Future Trends** and in **Prospects.ac.uk Sector Information**. Many sites including euskills, have links to useful labour market reports.

A Year 12 student interested in the oil and gas industry could gain a great deal from looking at **myoilandgascareer**, as well as **prospects and cogent**.

A tutor seeking resources could find some in the teacher sections of **Futuremorph** **thinkenergy** and **thinkpowersector** and **myoilandgascareer** (education section).

An unemployed adult should use the National Careers Service and could find much to interest them in **thinkpowersector** in the career changers and service leavers sections.

A year 9 student wanting to find out more about science could look at **Tomorrow's Engineers** as well as **Futuremorph** for inspiration. The Power kids section of **thinkpowersector** may also be of interest.
