

Feminism Counts

Quantitative Methods & Feminist Research

7th November 2008

University of Warwick

This conference will:

- **Examine** the historically complex relationship between feminist research and quantitative methods.
- **Explore** a range of dilemmas that contemporary feminists face when using quantitative tools and techniques.
- **Cross** the quantitative-qualitative divide.

The conference is aimed at:

Feminist researchers who use quantitative methods in their research *and* those who do not. It will provide the former with an opportunity to reflect on their practice and the latter a space to explore the potential of this methodology.

Speakers:

Dr Jane Elliott, Centre for Longitudinal Studies, Institute of Education

Dr Liz Hodgkinson, School of Engineering, University of Plymouth

Professor Kate Purcell, Institute for Employment Research, University of Warwick

Professor Jackie Scott, Faculty of Social and Political Sciences, University of Cambridge

The conference will be followed by a **professional development workshop on Friday 14th November** aimed at feminist researchers who have not previously used quantitative methods in their research and are interested in finding out a bit more about what data exist and what researchers can do with them.

Call for papers for Special Issue of the International Journal of Social Research Methodology

'Feminism Counts: Quantitative Methods and Gender Research'
