Web3.0 vs The Metaverse

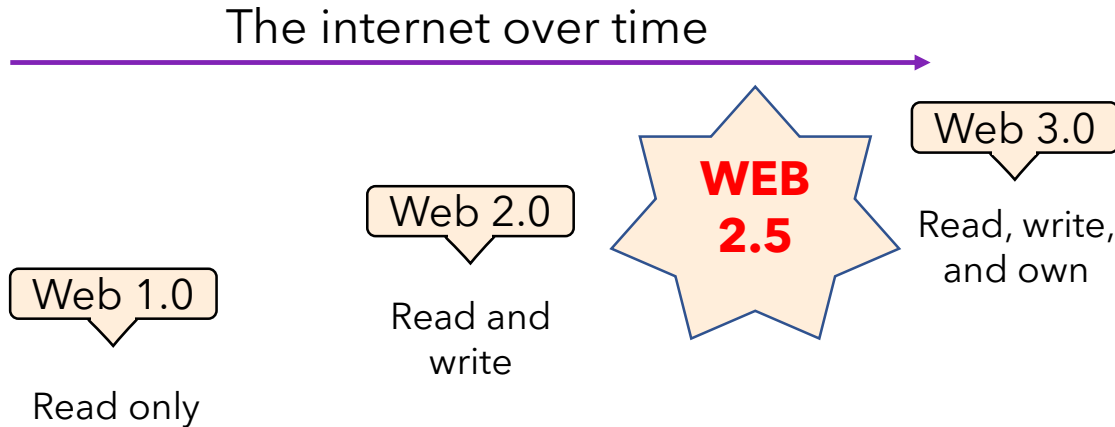

Web3.0

We often hear Web 3.0 and the Metaverse used interchangeably. But they are different things.

Web3.0

We often hear Web 3.0 and the Metaverse used interchangeably. But they are different things.

Web3.0 vs The Metaverse

Web3.0

- An iteration of the Internet that we know today
- It will be access through the interfaces that use on today's internet
- It will be blockchain controlled, leveraging Peer-to-Peer interactions
- It will be decentralized, deferring from today's centralized system
- Individuals will own their data, control access and regulate standards
- It will be built on the Blockchain and cryptocurrency technologies, and leverage ownership through NFTs

Metaverse

- Digital environment the combines digital enhanced realities
- Whilst companies are building the metaverse, its application is under review
- It will be accessed by VR, AR, and XR
- It will apply to all scenarios, including training, entertainment and learning
- Its underlying nature will be through connective technology
- Technical access will be through the web, spatial mapping

A Definition...

An evolution of the internet that enables us to move beyond **browsing** to **participating** and/or Inhibiting in a persistent' shared experience that spans the spectrum of our real world to a fully virtual world and in between.

A bit more detail...

- Massively-scaled
- Interoperable network
- Real-time rendered
- 3D
- Virtual Worlds
- Synchronous
- Persistent
- Unlimited users
- Individual sense of presence
- Continuity of data

Digital Currencies...?

Digital currency has the potential to change how society thinks about money completely. The rise of **Bitcoin** (BTC), **Ethereum** (ETH) and thousands of other cryptocurrencies that exist only in electronic form has led global central banks to research how national digital currencies might work.

Cryptocurrency

A cryptocurrency is a digital, encrypted, and decentralized medium of exchange. Unlike the U.S. Dollar or the Euro, there is no central authority that manages and maintains the value of a cryptocurrency. Instead, these tasks are broadly distributed among a cryptocurrency's users via the internet.

Stablecoins

A stablecoin is a cryptocurrency whose value is pegged to the price of another asset, hence the term "stable." For example, if functioning correctly a stablecoin pegged to the U.S. dollar should always be valued at \$1.

Central Bank Digital Currency (CBDCs)

A central bank digital currency is a digital currency that is issued and overseen by a country's central bank. Think of it like Bitcoin, but if Bitcoin were managed by the Federal Reserve and had the full backing of the U.S. government

Money in the metaverse

Cryptocurrency

A cryptocurrency is a digital, encrypted, and decentralized medium of exchange. Unlike the U.S. Dollar or the Euro, there is no central authority that manages and maintains the value of a cryptocurrency. Instead, these tasks are broadly distributed among a cryptocurrency's users via the internet.

Vault Hill City: Digital Currency usage

1

VAULT HILL CITY ✓

- Virtual Land
- Advertising
- Paid for Activities
(public space)

2

MARKETPLACE ✓

- In world assets
- Virtual buildings

3

AVATARS ✓

- Skins
- Wearables

4

XR CONSULTING ✓

- Bespoke buildings
- Bespoke experiences
- Advisory services
- Outsourced projects

5

\$VHC ✓

- Fixed Supply
- DAO
