Obesity

Definition, Disease, Stigma, Structure & Funding (or, lack of it)

Dr. Thomas M Barber
Associate Professor and Honorary Consultant Endocrinologist
University of Warwick and UHCW NHS Trust

Sustainable Coventry & Warwickshire Symposium
University of Warwick, 11th October 2021
Definition

Based on Body Mass Index (BMI)

- Obesity is defined as abnormal or excessive fat accumulation that may impair health.¹
- BMI provides the most convenient population-level measure of overweight and obesity currently available.¹

\[
BMI = \frac{\text{weight (kg)}}{\text{height (m)}^2}
\]

Barber, TM. *Expert Review of Endocrinology and Metabolism* (2018); Volume 13; Issue 2; pp 59-61
Definition

The problems with BMI as the diagnostic criterion for obesity

Body size vs adiposity

In a nutshell, body size does NOT accurately reflect body fat content

From muscular hypertrophy to sarcopenia

Muscle mass influences BMI and at extremes of body habitus, BMI is a misleading and inaccurate measure of body fat content
Disease

Obesity associates with multiple comorbidities

Metabolic, Mechanical and Mental

- Sleep apnoea
- Cardiovascular diseases
  - Stroke
  - Dyslipidaemia
  - Hypertension
  - Coronary artery disease
  - Coronary heart failure
  - Pulmonary embolism
- Chronic back pain
- Type 2 diabetes
- Prediabetes
- Thrombosis
- Gout

- Metabolic
- Mechanical
- Mental
- Cancers*
- Physical functioning

- Depression
- Anxiety
- Asthma
- NAFLD
- Gallstones
- Infertility
- Incontinence
- Arthrosis

*Including breast, colorectal, endometrial, gynaecological, kidney, ovarian, pancreatic and prostate

Sharma. Obes Rev (2010); Volume 11; pp 808-809
Impaired health-related quality of life in people with obesity

Prevalence of impairment (%)

BMI (kg/m²):
- <25
- ≥25 to <30
- ≥30

- Physical: 6, 6, 12
- Psychological: 10, 10, 15
- Sexual: 19, 22, 27

*Physical function assessed by Short Form-36 (SF-36); psychological function assessed by SF-36 and Beck's Depression Inventory; sexual function assessed by European Male Ageing Study sexual function questionnaire. n=3369 males; complete data concerning frequency of sexual activities and erectile function were available in 2734 (92%) and 3193 (95%) of the participants, respectively. QoL, quality of life

BMI=Body Mass Index; eGFR=estimated Glomerular Filtration Rate
Disease

Obesity meets common criteria of a disease

AMA
- An impairment of the normal functioning of some aspect of the body
- Characteristic signs or symptoms
- Harm or morbidity

Obesity

- Appetite dysregulation
- Abnormal energy balance
- Endocrine dysfunction
- Infertility
- NAFLD
- Dyslipidaemia

- Increased body fat
- Symptoms associated with increased body fat including:
  - Joint pain
  - Immobility
  - Sleep apnoea

- Type 2 diabetes
- Cardiovascular disease
- Cancer
- Osteoporosis
- Polycystic ovary syndrome

AMA, American Medical Association, NAFLD, non-alcoholic fatty liver disease

Disease

Obesity is recognised as a disease and health issue

- "The World Obesity Federation takes the position that obesity is a chronic, relapsing, progressive disease process and emphasizes the need for immediate action for prevention and control of this global epidemic."  
  World Obesity Federation

- "Obesity is characterized by excess body fat that can threaten or affect your health. Many organizations including the Canadian Obesity Network, now consider obesity to be a chronic disease."  
  Obesity Canada

- "Recognizing obesity as a disease will help change the way the medical community tackles this complex issue that affects approximately one in three Americans."  
  American Medical Association

- "A progressive disease, impacting severely on individuals and society alike, it is widely acknowledged that obesity is the gateway to many other disease areas..."  
  European Association for the Study of Obesity

- "Obesity is a chronic relapsing health risk defined by excess body fat."  
  The US Food and Drug Administration

- "Obesity is recognised as a chronic clinical condition and is considered to be the result of interactions of genetic, metabolic, environmental and behavioural factors, and is associated with increases in both morbidity and mortality."  
  European Medicines Agency

References:
Stigma

Obesity is highly stigmatised by the media and society.

This is discrimination and totally unacceptable. Society needs to look at itself and stop normalising this behaviour.
Stigma
The implications of weight stigma
Structure

Tier system for UK weight management

Clinical component

Pre-op assessment
Specialist assessment
Identification and primary assessment
Prevention and reinforcement of healthy eating and physical activity messages

Commissioned services

Tier 4
Surgery

Tier 3
Specialist services

Tier 2
Lifestyle Interventions

Tier 1
Universal Interventions

Bariatric surgery
Multi-disciplinary teams
Multicomponent weight management service
Environmental and population-wide services and initiatives
Funding

Cost of obesity and diabetes to the NHS

**Obesity**

The NHS spent an estimated **£6.1 billion** on overweight and obesity-related ill health in 2014/15

Obesity costs the wider society an estimated **£27 billion**

**Diabetes**

The NHS spends over **£10 billion** per year on diabetes

Spending on diabetes constitutes **10%** of the NHS budget

More is spent each year on treatment of obesity and diabetes than on the **police, fire service and judicial system combined**

---

Funding

NHS plans for obesity

• There is recognition of significant variation in provision of Tier 3 services across the country

• The UK Government’s obesity strategy, launched in July 2020, outlined commitments to expanding the provision of NHS weight management service across England, including accelerating the NHS Diabetes Prevention Programme

• Under the strategy, from 2021 doctors will be incentivised under the Quality Outcomes Framework to ensure everyone living with obesity is offered support for weight loss

• Following on from the publication of the strategy, the NHS launched a diet programme to reduce Type 2 diabetes and obesity. The year-long plans will see those who could benefit provided with ‘total diet replacement products’, such as shakes and soups, for three months, alongside support to increase their exercise levels
