IGSD Visualisation Project: One-page summary

A visualisation-driven service designed to support decision-makers in developing interdisciplinary research strategies and activities

A service rather than a planform

As a service, end-users don't need to engage with or understand any technical details of the visualisation tool before using it.

Objectives

1. **Research visualisation**
   Visualise the landscape of the University's interdisciplinary (e.g., SDG-related) research

2. **Collaboration facilitation**
   Facilitate cross-disciplinary and cross-faculty collaboration within the University for large-scale funding applications

3. **Practice improvement**
   Improve the reporting and evaluation practices of the University's SDG-relevant research (e.g., for university rankings)

Two types of services

1. **Regular reports as decks of slides**
   - Research patterns, trends, and networks over the past years
   - Termly updates to be incorporated into committee meetings at various levels
   - Annual report for cross-university comparisons

2. **On-demand requests**

We will be collecting feedback on this service in October 2024. If you find this service relevant to your department and would like to get involved (e.g., testing or co-developing regular reports), please contact Dr Feng Mao at Feng.Mao@Warwick.ac.uk.
