Energy Performance Certificate

Flat 9,
Lakeside Apartments,
University of Warwick,
COVENTRY,
CV4 7AL

Dwelling type: Ground-floor flat
Date of assessment: 09 June 2009
Reference number: 0518-6037-6216-6621-9080
Total floor area: 71 m²

This home’s performance is rated in terms of the energy use per square metre of floor area, energy efficiency based on fuel costs and environmental impact based on carbon dioxide (CO₂) emissions.

### Energy Efficiency Rating

- **Very energy efficient - lower running costs**
  - (92+) A
  - (81-91) B
  - (69-80) C
  - (55-68) D
  - (39-54) E
  - (21-38) F
  - (1-20) G

- **Not energy efficient - higher running costs**

### Environmental Impact (CO₂) Rating

- **Very environmentally friendly - lower CO₂ emissions**
  - (92+) A
  - (81-91) B
  - (69-80) C
  - (55-68) D
  - (39-54) E
  - (21-38) F
  - (1-20) G

### England & Wales

- **Current**: 81
- **Potential**: 84

### Estimated energy use, carbon dioxide (CO₂) emissions and fuel costs of this home

<table>
<thead>
<tr>
<th></th>
<th>Current</th>
<th>Potential</th>
</tr>
</thead>
<tbody>
<tr>
<td>Energy use</td>
<td>151 kWh/m² per year</td>
<td>129 kWh/m² per year</td>
</tr>
<tr>
<td>Carbon dioxide emissions</td>
<td>1.8 tonnes per year</td>
<td>1.5 tonnes per year</td>
</tr>
<tr>
<td>Lighting</td>
<td>£48 per year</td>
<td>£37 per year</td>
</tr>
<tr>
<td>Heating</td>
<td>£241 per year</td>
<td>£224 per year</td>
</tr>
<tr>
<td>Hot water</td>
<td>£96 per year</td>
<td>£82 per year</td>
</tr>
</tbody>
</table>

Based on standardised assumptions about occupancy, heating patterns and geographical location, the above table provides an indication of how much it will cost to provide lighting, heating and hot water to this home. The fuel costs only take into account the cost of fuel and not any associated service, maintenance or safety inspection. This certificate has been provided for comparative purposes only and enables one home to be compared with another. Always check the date the certificate was issued, because fuel prices can increase over time and energy saving recommendations will evolve.

To see how this home can achieve its potential rating please see the recommended measures.

This EPC and recommendations report may be given to the Energy Saving Trust to provide you with information on improving your dwellings’s energy performance.

For advice on how to take action and to find out about offers available to make your home more energy efficient, call 0800 512 012 or visit www.energysavingtrust.org.uk/myhome

Page 1 of 5
The Energy Performance Certificate for this dwelling was produced following an energy assessment undertaken by a qualified assessor, accredited by Elmhurst Energy Systems Ltd, to a scheme authorised by the Government. This certificate was produced using the RdSAP 2005 assessment methodology and has been produced under the Energy Performance of Buildings (Certificates and Inspections) (England and Wales) Regulations 2007 as amended. A copy of the certificate has been lodged on a national register.

Assessor’s accreditation number: EES/003443
Assessor’s name: Mr. Trevor Lee
Company name/trading name: Lee Energy Assessments
Address: 145 Stonebury Avenue, Eastern Green, Coventry, West Midlands, CV5 7DW
Phone number: 02476 471 056
Fax number: 
E-mail address: trevor@lee-energy.co.uk
Related party disclosure:

If you have a complaint or wish to confirm that the certificate is genuine
Details of the assessor and the relevant accreditation scheme are as above. You can get contact details of the accreditation scheme from their website at www.elmhurstenergy.co.uk together with details of their procedures for confirming authenticity of a certificate and for making a complaint.

About the building’s performance ratings
The ratings on the certificate provide a measure of the building's overall energy efficiency and its environmental impact, calculated in accordance with a national methodology that takes into account factors such as insulation, heating and hot water systems, ventilation and fuels used. The average Energy Efficiency Rating for a dwelling in England and Wales is band E (rating 46).

Not all buildings are used in the same way, so energy ratings use 'standard occupancy' assumptions which may be different from the specific way you use your home. Different methods of calculation are used for homes and for other buildings. Details can be found at www.communities.gov.uk/epbd.

Buildings that are more energy efficient use less energy, save money and help protect the environment. A building with a rating of 100 would cost almost nothing to heat and light and would cause almost no carbon emissions. The potential ratings on the certificate describe how close this building could get to 100 if all the cost effective recommended improvements were implemented.

About the impact of buildings on the environment
One of the biggest contributors to global warming is carbon dioxide. The way we use energy in buildings causes emissions of carbon. The energy we use for heating, lighting and power in homes produces over a quarter of the UK's carbon dioxide emissions and other buildings produce a further one-sixth.

The average household causes about 6 tonnes of carbon dioxide every year. Adopting the recommendations in this report can reduce emissions and protect the environment. You could reduce emissions even more by switching to renewable energy sources. In addition there are many simple everyday measures that will save money, improve comfort and reduce the impact on the environment. Some examples are given at the end of this report.

Visit the Government’s website at www.communities.gov.uk/epbd to:
- Find how to confirm the authenticity of an energy performance certificate
- Find how to make a complaint about a certificate or the assessor who produced it
- Learn more about the national register where this certificate has been lodged - the Government is the controller of the data on the register
- Learn more about energy efficiency and reducing energy consumption
**Summary of this home’s energy performance related features**

The following is an assessment of the key individual elements that have an impact on this home’s performance rating. Each element is assessed against the following scale: Very poor / Poor / Average / Good / Very good.

**Low and zero carbon energy sources**

None
### Recommendations

The measures below are cost effective. The performance ratings after improvement listed below are cumulative, that is they assume the improvements have been installed in the order that they appear in the table.

<table>
<thead>
<tr>
<th>Lower cost measures (up to £500)</th>
<th>Typical savings per year</th>
<th>Performance ratings after improvement</th>
</tr>
</thead>
<tbody>
<tr>
<td>1 Low energy lighting for all fixed outlets</td>
<td>£9</td>
<td>B 82</td>
</tr>
<tr>
<td><strong>Sub-total</strong></td>
<td><strong>£9</strong></td>
<td></td>
</tr>
</tbody>
</table>

<table>
<thead>
<tr>
<th>Higher cost measures (over £500)</th>
<th>Typical savings per year</th>
<th>Performance ratings after improvement</th>
</tr>

</tbody>
</table>

**Potential energy efficiency rating**

B 84

**Potential environmental impact (CO2) rating**

B 82

### Further measures to achieve even higher standards

None

Improvements to the energy efficiency and environmental impact ratings will usually be in step with each other. However, they can sometimes diverge because reduced energy costs are not always accompanied by a reduction in carbon dioxide (CO2) emissions.
About the cost effective measures to improve this home’s energy ratings

If you are a tenant, before undertaking any work you should check the terms of your lease and obtain approval from your landlord if the lease either requires it, or makes no express provision for such work.

Lower cost measures (typically up to £500 each)

These measures are relatively inexpensive to install and are worth tackling first. Some of them may be installed as DIY projects. DIY is not always straightforward, and sometimes there are health and safety risks, so take advice before carrying out DIY improvements.

1 Low energy lighting

Replacement of traditional light bulbs with energy saving recommended ones will reduce lighting costs over the lifetime of the bulb, and they last up to 12 times longer than ordinary light bulbs. Also consider selecting low energy light fittings when redecorating; contact the Lighting Association for your nearest stockist of Domestic Energy Efficient Lighting Scheme fittings.

Higher cost measures (typically over £500 each)

2 Band A condensing boiler

A condensing boiler is capable of much higher efficiencies than other types of boiler, meaning it will burn less fuel to heat this property. This improvement is most appropriate when the existing central heating boiler needs repair or replacement, but there may be exceptional circumstances making this impractical. Condensing boilers need a drain for the condensate which limits their location; remember this when considering remodelling the room containing the existing boiler even if the latter is to be retained for the time being (for example a kitchen makeover). Building Regulations apply to this work, so your local authority building control department should be informed, unless the installer is registered with a competent persons scheme¹, and can therefore self-certify the work for Building Regulation compliance. Ask a qualified heating engineer to explain the options.

About the further measures to achieve even higher standards

Not applicable

What can I do today?

Actions that will save money and reduce the impact of your home on the environment include:

- Ensure that you understand the dwelling and how its energy systems are intended to work so as to obtain the maximum benefit in terms of reducing energy use and CO2 emissions.

- Check that your heating system thermostat is not set too high (in a home, 21°C in the living room is suggested) and use the timer to ensure you only heat the building when necessary.

- Turn off lights when not needed and do not leave appliances on standby. Remember not to leave chargers (e.g. for mobile phones) turned on when you are not using them.

- Close your curtains at night to reduce heat escaping through the windows.

- If you’re not filling up the washing machine, tumble dryer or dishwasher, use the half-load or economy programme.

¹ For information on approved competent persons schemes enter "existing competent person schemes" into an internet search engine or contact your local Energy Saving Trust advice centre on 0800 512 012.
