

ELECTRICAL INSTALLATION CONDITION

REPORT Requirements For Electrical Installations - BS 7671

Certificate Number:

95151

				G THE	REPORT							
Client:	3	of Warwick										
Address:	Estates Of	fice, Porta Ca	abin, R/O Boil	er House	e, Lord Bhattachary	/ya Way, Cove	ntry, CV4 7	λL				
2 REASON FOR PRODUCING THIS REPORT Reason for producing this report:												
Reason for producing this report: Safety assessment as requested by the client.												
Date(s) on w	hich inspect	ion and testing	g was carried o	ut:	01/12/2022							
3 DETAILS OF THE INSTALLATION WHICH IS THE SUBJECT OF THIS REPORT												
Installation Address: University of Warwick, Wellesbourne Campus, 3 The Crescent, Warwickshire, CV35 9EQ												
Description of premises: Domestic N/A Commercial 🖌 Industrial N/A Other: N/A												
Estimated ag	ge of wiring s	system:	15 years		idence of additions/ erations:	No if yes	s, estimated a	age: N/A years				
Installation re	ecords availa	able? (Regulat	ion 651.1)	Yes		Date of last ins	spection:	16/10/2019				
	NT AND L	ΙΜΙΤΑΤΙΟ	NS OF INS	PECTIC	ON AND TESTIN	NG

OBSERVATIONS AND RECOMMENDATIONS FOR ACTIONS TO BE TAKEN											
Referring to the attached schedules of inspection and test results, and subject to the limitations specified on page of this report under 'Extent of the Installation and Limitations of Inspection and Testing':											
N/A There are no items adversely affecting electrical safety or											
✓ The following observations and recommendations are made											
Item No		Observations	Classification Code								
Genera	al										
1	No SPD Or AFDDs On-Site - {534.1}		C3								
Main Incomer											
04-036-00-001-DB1 (MK)											
2	2 DB Is Made Of Combustible Material.										
3	No Mechanical Protection For Incoming Ca	bles To DB.	C2								
4	Circuit 4 - Zs Exceeds Maximum Zs Permitted.										
5	Circuit 12 - FCU Faceplate And Back Box Needs Replacing.										
6	Circuit 13 - Smoke Head Needs Replacing.		C2								
	ne following codes, as appropriate, has been allo ble for the installation the degree of urgency for	cated to each of the observations made above to indicate to remedial action	the person(s)								
C1 Dar Risk	edial action required	ngerous C3 Improvement FI Further inv	vestigation vithout delay								
Immedia	ate remedial action required for items:	N/A									
Urgent r	remedial action required for items:	3, 5, 6									
Improve	ement recommended for items:	1, 2									
Further	investigation required for items:	4									

GENERAL CONDITION OF THE INSTALLATION General condition of the installation (in terms of electrical safety):																	
This installation is a fair condition.																	
Main equipotential bonding connections to the following services Water / Gas are connected in 10mm conductors																	
	located in the following locations 001(Water) & External Of Room 003(Gas)																
9 DECLARATION																	
I/We, being the person(s) responsible for the inspection and testing of the electrical installation (as indicated by my/our																	
signature	es belov	v), particulars	s of which a	are desc	ribed abov	/e, hav	ing exercis	ed reasonabl	le skill a	and car	e when ca	rrying	out the				
		esting, hereby urate assessm															
provides an accurate assessment of the condition of the electrical installation taking into account the stated extent and limitations in section 4 of this report.

12/11	ISPECTION SCHEDULE											
Item	Description	Outcome										
1.0	EXTERNAL CONDITION OF INTAKE EQUIPMENT (VISUAL INSPECTION ONLY) Where inadequacies in intake equipment are encountered, it is recommended that the person ordering the rep the appropriate authority	oort informs										
1.1	Service cable	LIM										
1.2	Service head	LIM										
1.3	Earthing arrangements	LIM										
1.4	Meter tails	LIM										
1.5	Metering equipment	LIM										
1.6	Isolator (where present)	LIM										
2.0	PRESENCE OF ADEQUATE ARRANGEMENTS FOR PARALLEL OR SWITCHED ALTERNATIVE SOURCES											
2.1	Adequate arrangements where a generating set operates as a switched alternative to the public supply (551.6)											
2.2	Adequate arrangements where a generating set operates in parallel with the public supply (551.7)											
3.0	AUTOMATIC DISCONNECTION OF SUPPLY											
3.1												
3.1.1	Presence of distributor's earthing arrangement (542.1.2.1; 542.1.2.2), or presence of installation earth electrode arrangement (542.1.2.3)	Pass										
3.1.2	Adequacy of earthing conductor size (542.3; 543.1.1)	Pass										
3.1.3	Adequacy of earthing conductor connections (542.3.2)	Pass										
3.1.4	Accessibility of earthing conductor connections (543.3.2)	Pass										
3.1.5	Adequacy of main protective bonding conductor sizes (544.1)	Pass										
3.1.6	Adequacy and location of main protective bonding conductor connections (543.3.2; 544.1.2)	Pass										
3.1.7	Accessibility of all protective bonding connections (543.3.2)	Pass										
3.1.8	Provision of earthing/bonding labels at all appropriate locations (514.13)											
3.2	FELV - requirements satisfied (411.7; 411.7.1)											
4.0	OTHER METHODS OF PROTECTION (where any of the methods listed below are employed details show provided on separate sheets)											
4.1	Non-conducting location (418.1)											
4.2	Earth-free local equipotential bonding (418.2)	N/A										
4.3	Electrical separation (Section 413; 418.3)	N/A										
4.4	Double insulation (Section 412)	N/A										
4.5	Reinforced insulation (Section 412)	N/A										
5.0	DISTRIBUTION EQUIPMENT											
5.1	Adequacy of working space/accessibility to equipment (132.12; 513.1)	Pass										
5.2	Security of fixing (134.1.1)	Pass										
5.3	Condition of insulation of live parts (416.1)	Pass										
5.4	Adequacy/security of barriers (416.2)	Pass										
5.5	Condition of enclosure(s) in terms of IP rating etc (416.2)	Pass										
5.6	Condition of enclosure(s) in terms of fire rating etc (421.1.6; 421.1.201; 526.5)	C3										
5.7	Enclosure not damaged/deteriorated so as to impair safety (651.2)	Pass										
5.8	Presence and effectiveness of obstacles (417.2)	N/A										
5.9	Presence of main switch(es), linked where required (462.1; 462.1.201; 462.2)	Pass										
5.10	Operation of main switch(es) (functional check) (643.10)	Pass										
5.11	Manual operation of circuit-breakers, RCDs and AFDDs to prove functionality (643.10)	Pass										
5.12	Confirmation that integral test button/switch causes RCD(s) to trip when operated (functional check) (643.10)	Pass										
5.13	RCD(s) provided for fault protection – includes RCBOs (411.4.204; 411.5.2; 531.2)	N/A										
5.14	RCD(s) provided for additional protection/requirements, where required – includes RCBOs (411.3.3; 415.1)	Pass										
	AES											
OUTCON Accepta		Not !N/A										
conditi	ble PASS Unacceptable C1 or C2 Improvement C3 Further FI Not N/V Limitation LIM ap	plicable N/A										

12/11	ISPECTION SCHEDULE (CONTINUED)											
Item	Description	Outcome										
5.15	Presence of RCD six-monthly test notice, where required (514.12.2)	Pass										
5.16	Presence of diagrams, charts or schedules at or near equipment, where required (514.9.1)	Pass										
5.17	Presence of alternative supply warning notice at or near equipment, where required (514.15)	N/A										
5.18	Presence of next inspection recommendation label (514.12.1)	Pass										
5.19	Presence of other required labelling (please specify) (Section 514)											
5.20	Compatibility of protective devices, bases and other components; correct type and rating (no signs of unacceptable thermal damage, arcing or overheating) (411.3.2; 411.4; 411.5; 411.6; Sections 432, 433)											
5.21	Single-pole switching or protective devices in line conductors only (132.14.1; 530.3.3)	Pass C2										
5.22	Protection against mechanical damage where cables enter equipment (522.8.1; 522.8.5; 522.8.11)											
5.23	Protection against electromagnetic effects where cables enter ferromagnetic enclosures (521.5.1)											
6.0	DISTRIBUTION CIRCUITS											
6.1	Identification of conductors (514.3.1)											
6.2	Cables correctly supported throughout their run (521.10.202; 522.8.5)	LIM										
6.3	Condition of insulation of live parts (416.1)	Pass Pass										
6.4	Non-sheathed cables protected by enclosure in conduit, ducting or trunking (521.10.1)											
6.5	Suitability of containment systems for continued use (including flexible conduit) (Section 522)	Pass										
6.6	Cables correctly terminated in enclosures (Section 526)	Pass										
6.7	Confirmation that ALL conductor connections, including connections to busbars, are correctly located in terminals and are tight and secure (526.1)	Pass										
6.8	Examination of cables for signs of unacceptable thermal or mechanical damage/deterioration (421.1; 522.6)	Pass										
6.9	Adequacy of cables for current-carrying capacity with regard for the type and nature of installation (Section 523)	Pass Pass										
6.10	Adequacy of protective devices: type and rated current for fault protection (411.3)											
6.11	Presence and adequacy of circuit protective conductors (411.3.1.1; 543.1)											
6.12	Coordination between conductors and overload protective devices (433.1; 533.2.1)											
6.13	Cable installation methods/practices with regard to the type and nature of installation and external influences (Section 522)	Pass										
6.14	Where exposed to direct sunlight, cable of a suitable type (522.11.1)	Pass										
6.15	Cables concealed under floors, above ceilings, in walls/partitions less than 50mm from a surface, an partitions containing metal parts:	d in										
6.15.1	Installed in prescribed zones (see Section 4. Extent and limitations) (522.6.202) or	Pass										
6.15.2	Incorporating earthed armour or sheath, or run within earthed wiring system, or otherwise protected against mechanical damage by nails, screws and the like (see Section 4. Extent and limitations) (522.6.204)	Pass										
6.16	Provision of fire barriers, sealing arrangements and protection against thermal effects (Section 527)	Pass										
6.17	Band II cables segregated/separated from Band I cables (528.1)	Pass										
6.18	Cables segregated/separated from non-electrical services (528.3)	Pass										
6.19	Condition of circuit accessories (651.2)	Pass										
6.20	Suitability of circuit accessories for external influences (512.2)	Pass										
6.21	Single-pole switching or protective devices in line conductors only (132.14.1; 530.3.3)	Pass										
6.22	Adequacy of connections, including cpcs, within accessories and to fixed and stationary equipment – identify/record numbers and locations of items inspected (Section 526)	Pass										
6.23	Presence, operation and correct location of appropriate devices for isolation and switching (Chapter 46; Section 537)	Pass										
6.24	General condition of wiring systems (651.2)	Pass										
6.25	Temperature rating of cable insulation (522.1.1; Table 52.1)	Pass										
7.0	FINAL CIRCUITS											
7.1	Identification of conductors (514.3.1)	Pass										
7.2	Cables correctly supported throughout their run (521.10.202; 522.8.5)	LIM										
7.3	Condition of insulation of live parts (416.1)	Pass										
OUTCON Accepta conditio	ble base Unacceptable of as co. Improvement too. Further tot. Not the training that N	ot ¦N/A										

12/11	ISPECTION SCHEDULE (CONTINUED)											
Item	Description	Outcome										
7.4	Non-sheathed cables protected by enclosure in conduit, ducting or trunking (521.10.1)	Pass										
7.5	Suitability of containment systems for continued use (including flexible conduit) (Section 522)	Pass										
7.6	Adequacy of cables for current-carrying capacity with regard for the type and nature of installation (Section 523)	Pass										
7.7	Adequacy of protective devices: type and rated current for fault protection (411.3)	FI										
7.8	Presence and adequacy of circuit protective conductors (411.3.1.1; 543.1)	Pass										
7.9	Co-ordination between conductors and overload protective devices (433.1; 533.2.1)	Pass										
7.10	Wiring system(s) appropriate for the type and nature of the installation and external influences (Section 522)	Pass										
7.11	Cables concealed under floors, above ceilings, in walls/partitions, adequately protected against dam (522.6.201; 522.6.202; 522.6.203; 522.6.204):	nage										
7.11.1	Installed in prescribed zones (see Section 4. Extent and limitations) (522.6.202)											
7.11.2	 Incorporating earthed armour or sheath, or run within earthed wiring system, or otherwise protected against mechanical damage by nails, screws and the like (see Section 4. Extent and limitations) (522.6.201; 522.6.204) 											
7.12	Provision of additional protection by 30mA RCD:											
7.12.1	For all socket-outlets of rating 32A or less, unless an exemption is permitted (411.3.3) *	Pass										
7.12.2	For the supply of mobile equipment not exceeding 32A rating for use outdoors (411.3.3) *	Pass										
7.12.3	For cables concealed in walls at a depth of less than 50mm (522.6.202, 522.6.203) *	Pass										
7.12.4	For cables concealed in walls/partitions containing metal parts regardless of depth (522.6.203) *	Pass										
7.12.5	For final circuits supplying luminaires within domestic (household) premises (411.3.4) *	N/A										
	* Note: Older installations designed prior to BS 7671:2018 may not have been provided with RCDs for additional protection.	al										
7.13												
7.14	Band II cables segregated/separated from Band I cables (528.1)	Pass										
7.15	Cables segregated/separated from non-electrical services (528.3)	Pass										
7.16	Termination of cables at enclosures – identify/record numbers and locations of items inspected (Sec 526):	ction										
7.16.1												
7.16.2	No basic insulation of a conductor visible outside enclosure (526.8)	Pass										
7.16.3	Connections of live conductors adequately enclosed (526.5)	Pass										
7.16.4	Adequately connected at point of entry to enclosure (glands, bushes etc.) (522.8.5)	Pass										
7.17	Condition of accessories including socket-outlets, switches and joint boxes (651.2)	C2										
7.18	Suitability of accessories for external influences (512.2)	Pass										
7.19	Single-pole switching or protective devices in line conductors only (132.14.1, 530.3.3)	Pass										
8.0	ISOLATION AND SWITCHING											
8.1	Isolators (Sections 460; 537):											
8.1.1	Presence and condition of appropriate devices (Section 462; 537.2.7)	Pass										
8.1.2	Acceptable location – state if local or remote from equipment in question (Section 462; 537.2.7)	Pass										
8.1.3	Capable of being secured in the OFF position (462.3)	Pass										
8.1.4	Correct operation verified (643.10)	Pass										
8.1.5	Clearly identified by position and/or durable marking (537.2.6)	Pass										
8.1.6	Warning label posted in situations where live parts cannot be isolated by the operation of a single device (514.11.1; 537.1.2)	N/A										
8.2	Switching off for mechanical maintenance (Section 464; 537.3.2):											
8.2.1	Presence and condition of appropriate devices (464.1; 537.3.2)	Pass										
8.2.2	Acceptable location – state if local or remote from equipment in question (537.3.2.4)	Pass										
8.2.3	Capable of being secured in the OFF position (462.3)	Pass										
8.2.4	Correct operation verified (643.10)	Pass										
8.2.5	Clearly identified by position and/or durable marking (537.3.2.4)	Pass										
OUTCON Accepta		lot '

12 / IN	ISPECTION SCHEDULE (CONTINUED)										
Item	Description	Outcome									
8.3	Emergency switching/stopping (Section 465; 537.3.3):										
8.3.1	Presence and condition of appropriate devices (Section 465; 537.3.3; 537.4)	N/A									
8.3.2											
8.3.3	3 Correct operation verified (643.10)										
8.3.4	4 Clearly identified by position and/or durable marking (537.3.3.6)										
8.4	Functional switching (Section 463; 537.3.1):										
8.4.1	Presence and condition of appropriate devices (537.3.1.1; 537.3.1.2)	Pass									
8.4.2	2 Correct operation verified (537.3.1.1; 537.3.1.2)										
9.0	CURRENT-USING EQUIPMENT (PERMANENTLY CONNECTED)										
9.1	Condition of equipment in terms of IP rating etc (416.2)	Pass									
9.2	Equipment does not constitute a fire hazard (Section 421)	Pass									
9.3	Enclosure not damaged/deteriorated so as to impair safety (134.1.1; 416.2; 512.2)	Pass									
9.4	Suitability for the environment and external influences (512.2)	Pass									
9.5	Security of fixing (134.1.1)	Pass									
9.6	Cable entry holes in ceiling above luminaires, sized or sealed so as to restrict the spread of fire: List number and location of luminaires inspected (separate page) (527.2)	Pass									
9.7	Recessed luminaires (downlighters):										
9.7.1	Correct type of lamps fitted (559.3.1)	N/A									
9.7.2	Installed to minimise build-up of heat by use of 'fire rated' fittings, insulation displacement box or similar (421.1.2)	N/A									
9.7.3	No signs of overheating to surrounding building fabric (559.4.1)	N/A									
9.7.4	No signs of overheating to conductors/terminations (526.1)	N/A									
10.0	LOCATION(S) CONTAINING A BATH OR SHOWER										
10.1	Additional protection for all low voltage (LV) circuits by RCD not exceeding 30mA (701.411.3.3)	Pass									
10.2											
10.3	Shaver supply units comply with BS EN 61558-2-5 formerly BS 3535 (701.512.3)	Pass									
10.4	Presence of supplementary bonding conductors, unless not required by BS 7671:2018 (701.415.2)	Pass									
10.5	Low voltage (e.g. 230 V) socket-outlets sited at least 2.5m from zone 1 (701.512.3)	N/A									
10.6	Suitability of equipment for external influences for installed location in terms of IP rating (701.512.2)	Pass									
10.7	Suitability of accessories and controlgear etc. for a particular zone (701.512.3)	Pass									
10.8	Suitability of current-using equipment for particular position within the location (701.55)	Pass									
11.0	OTHER PART 7 SPECIAL INSTALLATIONS OR LOCATIONS List all other special installation or locations present, if any. (Record separately the results of particular inspection	ons)									
11.1	N/A	N/A									
11.2	N/A	N/A

GENERAL COMMENTS

General Comments for the Installation or Inspection of the report:

Characteristics of primary supply overcurrent device not inspected. The maximum demand has not been calculated.

Insulation Resistance Tests have been carried out as far as reasonably possible (linked line & neutral to earth tests were

undertaken on circuits where it was not feasible to disconnect vast amounts of equipment as agreed with Nigel Harrison - Estates) and a minimum of 20% of termination points on each individual circuit, and on lighting circuits a minimum of two luminaries and two switches have been inspected.

Reference methods were inspected as far as reasonably practicable with reference to any previous documentation held on site (if applicable).

The numbers of points served has been investigated as far as is reasonably practicable and only accessible points are included in this report. Limitations will be due to large items of furniture or equipment that cannot be easily moved.

Cable sizes and lengths were estimated and could not be absolutely confirmed.

No Access to electrical system above 3Meters access equipment needs to be arranged; Where it has not been possible to access the end of final circuit a reading has been taken at a point furthest from the Distribution Board.

The numbers of points served has been investigated as far as is reasonably practicable.

Please refer to previous inspection reports for additional information, these are held on site by estates

Report serial number - 63392

Site Specific

- LIM1. Unable to locate circuit destination
- LIM2. No access to room or area due to it being locked or forbidden
- LIM3. Above 3Meters (Not Used on this site)
- LIM4. No access to equipment due to it being blocked
- LIM5. No access to equipment due to it having unremovable covers
- LIM6. Unable to isolate following instruction by member of staff on / off site
- LIM7. No power at points on the circuit
- LIM8. No cpc at points on the circuit
- LIM9. No access to parts / area due presence of asbestos

Db Listed Below: Limitations Found? No

General Comments for the Installation or Inspection of the report:

Approximate Submains Lengths (To listed distribution boards) -

04-036-00-001-DB1 (MK) - 2Meters

GENERAL COMMENTS

General Comments for the Installation or Inspection of the report:

Switch Panel Check List.

Building Name: House 3 Building Code: 04-036 Switch Panel: 04-036-00-001-DB1

Switch Panel Checklist: Items That have been inspected are listed below: Check for missing structural/IP panel parts or damage to panel. Check for labelling/ identification is in place. Check that correct fuses have been installed for each fuse carrier. An air gap should be present between each fuse. Check that all shields over terminals are not damaged in situ. Check torque of fuse terminals to identify any damaged threads resulting in loose high resistance terminals or over tightened bolts. Carry out an examination of terminals and cables using heat gun on full load (agreed Limitation) General Notes: None Main Incomer Inspection:

Labelling / Identification: Yes Fuse Rating: 80 Shields in Place: Yes Torque of terminals: Yes Notes: None Switch Fuse Inspection: Labelling / Identification: Yes Fuse Rating: 100 Shields in Place: Yes Torque of terminals: Yes Notes: None

ELECTRICAL INSTALLATION CONDITION REPORT GUIDANCE FOR RECIPIENTS

(to be appended to the Report)

This Report is an important and valuable document which should be retained for future reference.

1. The purpose of this Report is to confirm, so far as reasonably practicable, whether or not the electrical installation is in a satisfactory condition for continued service (see Section 5). The Report should identify any damage, deterioration, defects and/or conditions which may give rise to danger (see Section 7).

2. This Report is only valid if accompanied by the Inspection Schedule(s) and the Schedule(s) of Circuit Details and Test Results

3. The person ordering the Report should have received the 'original' Report and the inspector should have retained a duplicate.

4. The original Report should be retained in a safe place and be made available to any person inspecting or undertaking work on the electrical installation in the future. If the property is vacated, this Report will provide the new owner/occupier with details of the condition of the electrical installation at the time the Report was issued.

5. Section 4 (Extent and Limitations) should identify fully the extent of the installation covered by this Report and any limitations on the inspection and testing. The inspector should have agreed these aspects with the person ordering the Report and with other interested parties (licensing authority, insurance company, mortgage provider and the like) before the inspection was carried out.

6. Some operational limitations such as inability to gain access to parts of the installation or an item of equipment may have been encountered during the inspection. The inspector should have noted these in Section 4.

7. For items classified in Section 7 as CI (Danger present), the safety of those using the installation is at risk, and it is recommended that a skilled person or persons competent in electrical installation work undertakes the necessary remedial work immediately.

8. For items classified in Section 7 as C2 (Potentially dangerous), the safety of those using the installation at risk and it is recommended that a skilled person or persons competent in electrical installation work undertakes the necessary remedial work as a matter of urgency.

9. Where it has been stated in Section 7 that an observation requires further investigation (code FI) the inspection has revealed an apparent deficiency which may result in a code CI or C2, and could not, due to the extent or limitations of the inspection, be fully identified. Such observations should be investigated without delay. A further examination of the installation will be necessary, to determine the nature and extent of the apparent deficiency (see Section 7).

10. For safety reasons, the electrical installation should be re-inspected at appropriate intervals by a skilled person or persons, competent in such work. The recommended date by which the next inspection is due is stated in Section 7 of the Report under Recommendations.

11. Where the installation includes a residual current device (RCD) it should be tested six-monthly by pressing the button marked 'T' or 'Test'. The device should switch off the supply and should then be switched on to restore the supply. If the device does not switch off the supply when the button is pressed, seek expert advice. For safety reasons it is important that this instruction is followed.

12. Where the installation includes an arc fault detection device (AFDD) having a manual test facility it should. be tested six-monthly by pressing the test button. Where an AFDD has both a test button and automatic test function, manufacturer's instructions shall be followed with respect to test button operation.

13. Where the installation includes a surge protective device (SPD) the status indicator should be checked to confirm it is in operational condition in accordance with manufacturer's information. If the indication shows that the device is not operational, seek expert advice. For safety reasons it is important that this instruction is followed.

14. Where the installation includes alternative or additional sources of supply, warning notices should be found at the origin or meter position or, if remote from the origin, at the consumer unit or distribution board and at all points of isolation of all sources of supply.
