Segmentation and Targeting
Dr Scott Dacko

Markets are heterogeneous. Lifestyles and interests vary across groups of customers...

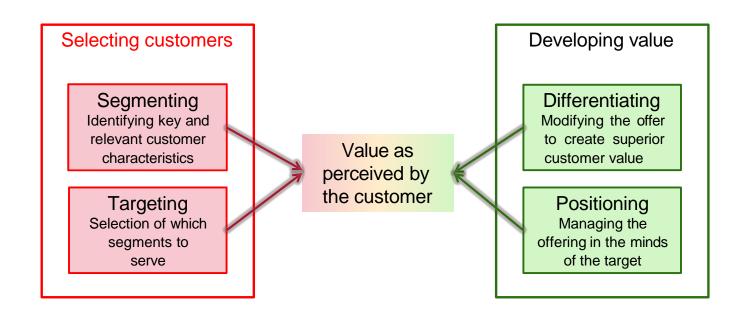

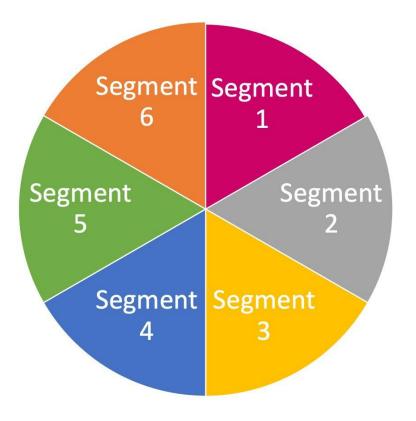

Warwick Business School wbs.ac.uk

So, the market includes a variety of value propositions (products) to match needs of different customer groups.

The Segmentation Process

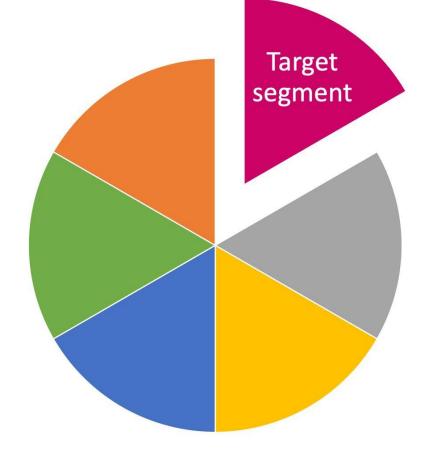

Three steps: [1] Segmentation:

- Dividing a diverse market into smaller more homogenous submarkets
- Identify groups which you can serve more effectively than the competition
- But, which are large enough to be profitable

Warwick Business School wbs.ac.uk

- Choose a brand one you have thought about previously or a different brand
- For that brand, what do you know about what the customers value?
- Is there more than one group who might value different things about this brand?
- How would you describe the characteristics / profile of each of these groups?

[2] Targeting:

- Once we have segmented the market, we need to decide which segment(s) to serve
- Getting this wrong can be disastrous!

Based on two factors

- Market attractiveness
- Capability to compete

Warwick Business School wbs.ac.uk

- For a chosen brand, would it be possible / profitable for you to target all of the groups you identified previously?
- If you had to prioritise the groups (target markets) on what basis would you do this?

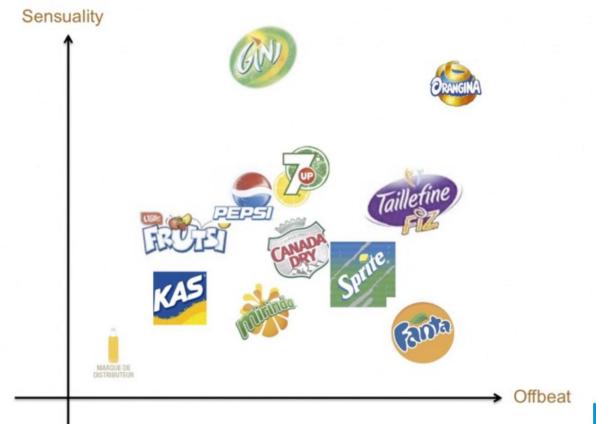

[3] Positioning:

Having identified a target segment, the company creates a differentiated value proposition for that customer group

Warwick Business School wbs.ac.uk

 A product's position is the way the product is defined by consumers on important attributes.

Target segment

[3] Positioning

warwick business school wbs.ac.uk

Segmentation:

Our Customers—What the picture looks like when **we don't know** much about them

Our Customers— What the picture looks like when **we know**more about them

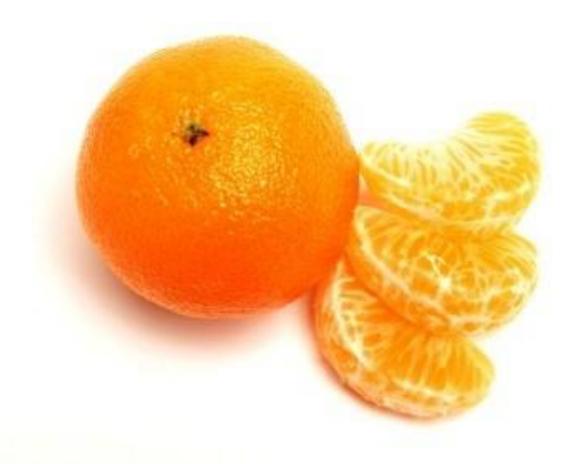

• What might we now conclude about this set of people and what they value?

What kind of similar characteristics might we identify in this group?

- Fans
- Watching an event out of home
- Age
- Gender
- Possibly Brazil fans
- Interested in football

Why Segment a Market

- key needs, wants and characteristics allows for more focused marketing strategies and tactics
- Better chances of success and meeting organisational objectives
- Prioritisation of marketing targets
- Effective use of marketing resources

Bases of Segmentation

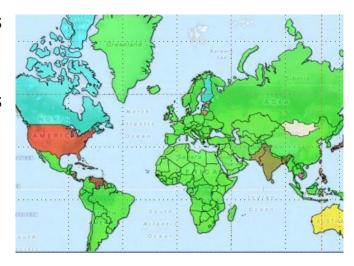

Might include:

geographic, demographic, psychographic and. behavioral

data to group customers by their characteristics and to determine who to target.

Geographic Segmentation

- Divides people or products into groups based upon where they live.
- Knowing where your fcustomers lives saves marketing time and money plus aids significantly in strategic planning.
- Customers of products and services have national, sub-national differences in their preferences
- Climate and physical environment are bases of differing needs and wants for some categories

Bus ness Segmentation by Region and Product Type

(Dollars in millions)	Fisc	al 2015	Fiscal 2014		% Change Excluding Currency Changes	Fiscal 2013	% Change	% Change Excluding Currency Changes

Examples of Geographic Segmentation

- Seasonal Goods eg: winter wear
- Product / Service with variation in preferences by region / country
- Products or Services affected by climate

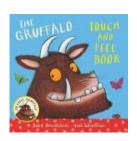

- Can you think of other brands that are segmented on a geographic basis?
- What do they need to do differently in their marketing for each of these geographic segments?

Demographic Segmentation

- By gender
- By age
- By ethnicity

- Can you think of other brands that are segmented on a socio demographic or psychographic basis?
- What do they need to do differently in their marketing for each of these socio demographic or psychographic segments?

Socio-economic

• Has to do with socio economic group, income, age of terminal education

Psychographic

- Lifestyle
- Stage of life

- Can you think of other brands that are segmented on a demographic basis?
- What do they need to do differently in their marketing for each of these demographic segments?

Behavioural

- Purchase behaviour
- Purchase Occasion
- Frequency of Purchase
- Consumption Patterns

Market Segmentation: Usage

- Consider a product which you would buy on different occasions eg:
- A Meal in a restaurant for a birthday celebration
- A Meal in a restaurant for work with an expense limit

- Consider:
- What
- Where
- Who with?
- What main considerations
- What type of restaurant?

Benefit Segmentation

- Haley argues that benefit segmentation is the ultimate basis as the others are descriptive, they tell you "who" or "what", but not always "why"
- It is causal, others are ascriptive (ie: they assume qualities and characteristics which fit with age, gender, lifestage etc

Perceptions, Attitudes, Beliefs, Values

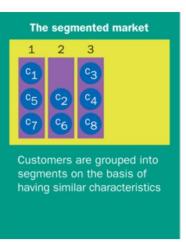

Example: A segmentation analysis of UK donors

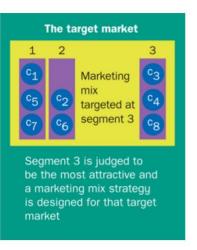

Figure 1: Money for Good UK donor segmentation

Engaged champion 'I give time and get my friends involved"	Benefactor "I give to lead by example"	Loyal supporter "I give because I care about the cause"	Faith-based donor "I give for my community"
Thoughtful philanthropist	Good citizen	Ad hoc giver	
"I give to make an impact"	"I give because it's the right thing to do"	"I give because I'm asked"	

- What does the segmentation of charity donors tell you?
- If you wanted to design a marketing campaign, how might you best appeal to each of these groups?

Warwick Business School wbs.ac.uk

Targeting

- These must be:
 - Identifiable
 - Viable
 - Stable
 - Marketable

Source: Dibb and Simkin 1991

Possible Targeting Strategies

Target none (do not compete in this market)

Undifferentiated or Mass (ignore segment differences; single offering to the entire market)

Differentiated (target multiple segments, each with a separate marketing programme)

Concentrated or Niche (dominate one or very few, carefully selected targets)

Micromarketing (localised or individual targets)

- What is the targeting strategy of:
 - McDonalds?
 - Ferrari?
 - Gucci or other luxury brands?
 - Lululemon
- Is it possible for a small, start up brand to have a mass market targeting strategy?
- What happens if you set up a website to sell your product /service.
 What type of targeting strategy might this be and what are the potential challenges?

Segment of One?

- Technology increasingly allows for customization of product / service offer and messaging
- Consider the example of Netflix: In what ways does this make it possible to treat customers on an individual rather than a group basis?
- Is it really individualized?
- What impact what technological developments, such as CRM, have on segmentation strategies?

Summary

- Customers can be divided into groups / clusters with similar needs and wants.
- It can be argued that benefit segmentation is the most effective method as it is causal, whereas other methods are descriptive. Benefit segmentation divides customers into groups seeking similar value
- Technology / CRM increasingly allows for targeting of smaller segments or personalization of the offer
- Target markets must meet criteria to make them attractive
- Marketers might target one or a number of target markets simultaneously.
 This might involve creation of separate marketing strategies: positioning / marketing mix
