

6 Astronomy

Astronomy, the study of space, has fascinated humans for thousands of years and all around the world professionals and amateurs are trying to make new discoveries.

YOUR CHALLENGE: Can you find the 11 differences between the images below? And once you have, you could colour in the pictures as well!

Anwasha (in the images above) works in the School of Physics where she uses radio telescopes to study the physics of sun-like stars (far, far away in the universe) when they die.

Space research helps scientists and engineers understand more about science topics, knowledge which is then used to help society in areas such as medicine, engineering and communication.
